

**Resilient Landscapes: Innovations
and Traditions in Climate-Adaptive
Soil and Water Conservation
(RISE-SWC)**

15th - 17th September 2025

**Training: “Youth Capacity for
Resilient Soil and Water
Conservation in a Changing
Climate”**

18th - 19th September 2025

The 6th WASWAC World Conference In Rabat, Morocco

✦ About Us

Global climate change is increasingly threatening soil and water resources through extreme weather events like heavy rainfall, droughts, and floods. These changes disrupt agricultural production and water availability, while soil erosion poses risks to ecosystem health. To address these challenges, the World Association for Soil and Water Conservation (WASWAC) and the National Institute of Agricultural Research (INRA) are organizing the 6th WASWAC World Conference in Rabat, Morocco, from September 15 to 17, 2025, along with training courses from September 18 to 19, 2025.

This event will bring together scientists, experts, and policymakers to discuss innovative strategies and practical solutions. Participants will explore how to integrate traditional knowledge with modern technologies and tackle socio-economic issues. The conference aims to propose actionable solutions that enhance global efforts to protect soil and water resources and support sustainable development.
